

## APPENDIX-I

### Academic Year 2023-24

### Detailed Programme Structure & Syllabus

#### Year wise Structure of M.Sc. in Computer Science

| Year                           | Semester              | Course Code                                      | Paper Title                              | Type of Course                   | Max. Marks | Credits   |   |
|--------------------------------|-----------------------|--|--|----------------------------------|------------|-----------|---|
| First                          | 1                     | MCS-101N   | Discrete Mathematics                     | Theory                           | 100        | 4         |   |
|                                |                       | MCS-102N   | C++ and Object-oriented programming      | Theory                           | 100        | 4         |   |
|                                |                       | MCS-103N   | Data Structures                          | Theory                           | 100        | 4         |   |
|                                |                       | MCS-104P   | Practical Work (Based on 102 & 103)      | Practical                        | 100        | 4         |   |
|                                |                       | PGBR-01  | Basics in Research                       | Research                         | 100        | 4         |   |
|                                | 2                     | MCS-106N   | Computer Organization                    | Theory                           | 100        | 4         |   |
|                                |                       | MCS-108N   | Data Communication and Computer Networks | Theory                           | 100        | 4         |   |
|                                |                       | MCS -109N  | Database Management System               | Theory                           | 100        | 4         |   |
|                                |                       | MCS -110P  | Practical Work (Based on 109)            | Practical                        | 100        | 4         |   |
|                                |                       | PGMP-02  | Mini Project                             | Mini Project                     | 100        | 4         |   |
| Second                         | 3                     | MCS-111N   | Design and Analysis of Algorithm         | Theory                           | 100        | 4         |   |
|                                |                       | MCS-112N   | Java Programming                         | Theory                           | 100        | 4         |   |
|                                |                       | MCS-113N   | Operating System                         | Theory                           | 100        | 4         |   |
|                                |                       | MCS-115P   | Practical Work (Based on 111 & 112)      | Practical                        | 100        | 4         |   |
|                                |                       | PGRT-03  | Basic Research Tools                     | Research                         | 100        | 4         |   |
|                                | 4                     | <b>Compulsory Core Paper</b>                     |  |                                  |            |           |   |
|                                |                       | MCS-117N   | Soft Computing                           | Theory                           | 100        | 4         |   |
|                                |                       | MCS-121D   | Dissertation with viva voce              | Research                         | 100        | 4         |   |
|                                |                       | <b>Select any one group (GROUP A OR GROUP B)</b> |  |                                  |            |           |   |
|                                |                       | <b>Group A</b>                                   | MCS-116N                                 | Computer Graphics                | Theory     | 100       | 4 |
|                                |                       |  | MCS-114N                                 | Multimedia Technology            | Theory     | 100       | 4 |
|                                |                       |  | MCS-119N                                 | Information and Network Security | Theory     | 100       | 4 |
|                                |                       | <b>OR</b>  |  |                                  |            |           |   |
|                                |                       | <b>Group B</b>                                   | MCS-104N                                 | Software Engineering             | Theory     | 100       | 4 |
| MCS-107N                       | Theory of Computation |  | Theory                                   | 100                              | 4          |           |   |
| MCS-120N                       | System Software       |  | Theory                                   | 100                              | 4          |           |   |
| <b>Total Credit/Max. Marks</b> |                       |  |  |                                  | <b>200</b> | <b>80</b> |   |

## Syllabus for M.Sc. in Computer Science

|   |   |   |                    |
|---|---|---|--------------------|
| Programme: <b>Master of Science</b>   |   | Year: <b>First</b>                        | Semester: <b>I</b> |
| <b>Subject: Computer Science</b>  |   |   |                    |
| Course Code: <b>MCS-101N</b>  |   | Course Title: <b>Discrete Mathematics</b> |                    |
| Course Objectives: This course provide students understand discrete objects such as proofs, sets, graphs, colorings, algebraic structures and algorithms that arise naturally and frequently in many areas of mathematics and computer science. It develops a sound understanding of these discrete objects to solve problems arising in computer science.  |   |   |                    |
| Course Outcomes:<br><b>CO1</b> Apply mathematical logic to solve problems.<br><b>CO2</b> Use logical notation to define and reason about fundamental mathematical concepts such as sets, relations, and functions.<br><b>CO3</b> Understand and apply counting techniques to the representation and characterization of relational concepts.<br><b>CO4</b> Impart foundations of probabilistic theory which is mostly used in varied applications in engineering and science. |   |   |                    |
| Credits: <b>04</b>  |   | Type of Course: <b>Core</b>               |                    |
| Max. Marks: <b>100</b>  |   | Min. Passing Marks: <b>36</b>             |                    |
| <b>Block 1</b>  | <b>Language of Mathematics and its application</b>  |   |                    |
| Unit 1  | <b>Mathematical Logic:</b> statements, operations, truth values, tautology and quantifiers.   |   |                    |
| Unit 2  | <b>Arguments:</b> Rule of Detachment, Validity of a compound statement by using Truth Table, Validity using Simplification Methods, Validity using Rules of Inference, Invalidity of an Argument, Indirect Method of proof and Proof by Counter-Example.  |   |                    |
| Unit 3  | <b>Boolean Algebra:</b> Boolean Algebra, Principle of Duality, Isomorphic Boolean Algebras, Boolean Algebra as Lattices, Boolean Functions, Disjunctive Normal Form, Conjunctive Normal Form, Minimization of Boolean Functions (Karnaugh Map)  |   |                    |
| Unit 4  | <b>Switching circuits and logical Circuits:</b> Switching Circuits, Simplification of circuit, Non-Series Parallel Circuits, Relay Circuits, Logic Circuits   |   |                    |
| <b>Block 2</b>  | <b>Set theory and its application</b>   |   |                    |
| Unit 5  | <b>Set theory:</b> sets, Subsets, Operations on Sets, Complementation, Intersection and Union, Laws Relating Operations, Distributive Laws and De Morgan's Laws.  |   |                    |
| Unit 6  | <b>Relation:</b> Relation, binary relations in a Set, Domain and Range of a Relation, Total number of Distinct Relations, Relations as Sets of Ordered Pairs, Types of Relations, Composition of Relations, Equivalence relation in a set, Partition of a Set, Equivalence Class and Quotient set of a set. |   |                    |
| Unit 7  | <b>Partitions and Distributions:</b> Equivalence Relations, Equivalence Classes, Properties of Equivalence Classes, Quotient set and Partition.   |   |                    |
| Unit 8  | <b>Function:</b> Functions, Direct and Inverse image, Inverse Functions, Operations on Functions, Composite of functions, Types of Functions and Connection between Equivalence relation and mapping.   |   |                    |
| <b>Block 3</b>  | <b>Counting Process</b>   |   |                    |
| Unit 9  | <b>Mathematical Induction:</b> Principle of Mathematical Induction, Second Principle of Induction and Well ordering property.   |   |                    |
| Unit 10   | <b>Combinatorics:</b> Basic counting principles, Principle of Disjunctive counting, Principle of Sequential counting and Ordered and Unordered Partitions.  |   |                    |
| Unit 11   | <b>Permutation</b>  |   |                    |

|  |  |
|--|--|
| Unit 12  | <b>Combination</b>   |
| <b>Block 4</b>   | <b>Block – 04: Probability theory and application</b>  |
| Unit 13  | <b>Binomial theorem:</b> Binomial theorem, General term in a binomial expansion, Middle term in a binomial expansion and Binomial expansion for rational exponents.  |
| Unit 14  | <b>Probability:</b> Definition of Probability, Addition law for counting and Product law for counting.   |
| Unit 15  | <b>General Counting methods:</b> General Counting method is the extension part of counting process. It discusses Sum and Product Rules and the Pigeonhole Principle. |
| Unit 16  | <b>The Inclusion- Exclusion Principle:</b> inclusion-exclusion principle, Alternative form of the inclusion-exclusion principle and Onto Functions.                  |
| <p><b>Suggested Readings:</b></p> <ol style="list-style-type: none"> <li>1. C.L.Liu and D.P.Mohapatra, " Elements of Discrete Mathematics: A Computer Oriented Approach", Mcgraw Hill, Third Edition, 2012.</li> <li>2. Kenneth H. Rosen, "Discrete Mathematics and Its Applications" Mcgraw Hill, Seventh Edition, 2012 (Indian Adaptation by Kamala Krithivasan, Iit Madras).</li> </ol> <p><b>Suggested online courses (MOOCs)</b></p> <ol style="list-style-type: none"> <li>1. NOC:Discrete Mathematics, IIT Ropar, Prof. Prabuchandran K.J, Prof. Sudarshan Iyengar;<br/><a href="https://nptel.ac.in/courses/106106183">https://nptel.ac.in/courses/106106183</a></li> <li>2. NOC:Discrete Mathematics, IIT Guwahati, Prof. Benny George K, Prof. Sajith Gopalan<br/><a href="https://nptel.ac.in/courses/106103205">https://nptel.ac.in/courses/106103205</a></li> </ol> |  |
| This course can be opted as an elective by the students of following subjects: <b>B.Sc. in Computer Science, B.Sc. in Physics, B.Sc. in Statistics, BCA</b>  |  |
| Suggested equivalent online courses (MOOCs) for credit transfer: N.A.  |  |

|   |   |  |                    |
|---|---|--|--------------------|
| Programme: <b>Master of Science</b>   |   | Year: <b>First</b>                                       | Semester: <b>I</b> |
| <b>Subject: Computer Science</b>  |   |  |                    |
| Course Code: <b>MCS-102N</b>  |   | Course Title: <b>C++ and Object-oriented programming</b> |                    |
| Course Objectives: This course aims to offer a practical mastery of object-oriented concepts such as classes, objects, data abstraction, methods, method overloading, inheritance and polymorphism.   |   |  |                    |
| Course Outcomes:<br><b>CO1</b> Develops a sound approach to problem solving using a middle level programming language.<br><b>CO2</b> Apply techniques like recursion and iteration are learnt to solve a problem.<br><b>CO3</b> Build programming concepts like pointers, structures. |   |  |                    |
| Credits: <b>04</b>  |   | Type of Course: <b>Core</b>                              |                    |
| Max. Marks: <b>100</b>  |   | Min. Passing Marks: <b>36</b>                            |                    |
| <b>Block 1</b>  | <b>BLOCK - 1</b>  |  |                    |
| Unit 1  | <b>Principles of object-oriented programming:</b> Object oriented programming paradigm, Comparison with procedural programming, Basic concepts of object-oriented programming, benefits of OOP, object-oriented Languages, advantage of C++.  |  |                    |
| Unit 2  | <b>Object Orient Programming System:</b> Class, inheritance, abstraction, encapsulation and information hiding, polymorphism, overloading.  |  |                    |
| Unit 3  | <b>Advanced concept:</b> Dynamism (Dynamic typing., dynamic binding, late binding, dynamic loading). Structuring programs, reusability, organizing object-oriented project,   |  |                    |
| <b>Block 2</b>  | <b>BLOCK - 2</b>  |  |                    |
| Unit 4  | <b>Overview of C++:</b> Tokens, keywords, identifiers and constants basic data types, user-defined and derived Data types, type compatibility, reference, variables type Casting, operator precedence, control structures, structure, function.   |  |                    |
| Unit 5  | <b>Classes and objects:</b> Class specification, class objects, accessing class members, scope resolution operator, data hiding, empty classes, Pointers within a class, passing objects as arguments, returning objects from functions, friend Functions and friend classes, constant parameters and member functions, structures and Classes, static members.                       |  |                    |
| Unit 6  | <b>Object initialization and cleanup:</b> Constructors destructor, constructor overloading. order of construction and destruction, Constructors with default arguments, nameless objects, dynamic initialization through Constructors, constructors with dynamic operations, constant objects and constructor, static Data members with constructors and destructors, nested classes. |  |                    |
| <b>Block 3</b>  | <b>BLOCK - 3</b>  |  |                    |
| Unit 7  | <b>Operator overloading and type conversion:</b> Defining operator overloading, overloading unary operators, overloading binary operators, overloading binary operators using friends, manipulation of strings using Operators, rules for overloading operators. type conversions.  |  |                    |
| Unit 8  | <b>Inheritance: extending classes:</b> Deriving derived classes, single multilevel, multiple, hierarchical, hybrid inheritance, Constructors & destructors in derived classes, constructors invocation and data members Initialization, virtual base classes, abstract classes, delegation.   |  |                    |
| <b>Block 4</b>  | <b>BLOCK- 4</b>   |  |                    |
| Unit 9  | <b>Pointers, virtual functions and polymorphism:</b> Pointers to objects, this pointer. pointers to derived classes, virtual functions, Implementation of run-time polymorphism, pure virtual functions.  |  |                    |
| Unit 10   | <b>Working with files:</b> Classes for file stream operations. opening and closing a file, file pointers and their Manipulations, sequential input and output operations, error handling during file Operations, command line arguments.  |  |                    |

|  |  |
|--|--|
| Unit 11  | <b>Object Oriented Modeling:</b> Need of object-oriented Modeling, Simulation of real-life problems using OOP concept: Example, Representation of problem using object and class diagrams at design level. |
| <p><b>Suggested Readings:</b></p> <ol style="list-style-type: none"> <li>1. The C++ Programming Language by Bjarne Stroustrup, 2013.</li> <li>2. Programming: Principles and Practice Using C++ by Bjarne Stroustrup, 2014</li> <li>3. The C Programming Language (Ansi C Version) by Brian W. Kernighan and Dennis M. Ritchie, 1990.</li> <li>4. The C Programming Language by Brian W. Kernighan and Dennis M. Ritchie, 2015</li> <li>5. Oriented Object-Oriented Programming with C++ by Balaguruswamy, TMH</li> </ol> <p><b>Suggested online courses (MOOCs)</b></p> <ol style="list-style-type: none"> <li>1. NOC:An Introduction To Programming Through C++, IIT Bombay by Prof. Abhiram G Ranade<br/><a href="https://nptel.ac.in/courses/106101208">https://nptel.ac.in/courses/106101208</a></li> <li>2. | <b>Subject: Computer Science</b>   |   |                                      |                    |
| Course Code: <b>MCS-103N</b>   |   | Course Title: <b>Data Structures</b> |                    |
| Course Objectives: The objective of the course is to familiarize students with basic data structures and their use in fundamental algorithms.  |   |                                      |                    |
| Course Outcomes:<br><b>CO1:</b> Understand basic data structures such as arrays, strings, and linked lists.<br><b>CO2:</b> Study linear data structures such as stacks and queues and understand their difference.<br><b>CO3:</b> Describe the hash function and concepts of collision and its resolution methods.<br><b>CO4:</b> Study tree, heap and graphs along with their basic operations.<br><b>CO5:</b> Study different techniques for solving problems like sorting and searching |   |                                      |                    |
| Credits: <b>04</b>   |   | Type of Course: <b>Core</b>          |                    |
| Max. Marks: <b>100</b>   |   | Min. Passing Marks: <b>36</b>        |                    |
| <b>Block 1</b>   | <b>BLOCK - 1</b>  |                                      |                    |
| Unit 1   | <b>Introduction to data structure:</b> Algorithm, Basic criteria for algorithms, Data type, Data structure, Data representation, linear and nonlinear data structure.   |                                      |                    |
| Unit 2   | <b>Basics of algorithm:</b> Algorithm, Basics of complexity of algorithm  |                                      |                    |
| Unit 3   | <b>Array:</b> Definition, Representation of array, Single and multi-dimensional array, address calculation (one dimensional, two dimensional, multidimensional), sparse matrices  |                                      |                    |
| <b>Block 2</b>   | <b>BLOCK – 2</b>  |                                      |                    |
| Unit 4   | <b>Stack:</b> Definition, Operations on stacks, Array representation and implementation of stack; infix, prefix and postfix representation of expression and evaluation multiple stacks, Application of stacks.   |                                      |                    |
| Unit 5   | <b>Recursion:</b> Recursive definition and processes, some named problems of recursion, principle of recursion: designing recursive algorithm, how recursion works, tail recursion.   |                                      |                    |
| Unit 6   | <b>Queue:</b> Definition, operation on queues, circular queue, dequeue, priority queue, Application of queue.   |                                      |                    |
| <b>Block 3</b>   | <b>BLOCK 3</b>  |                                      |                    |
| Unit 7   | <b>Linked List:</b> Representation and implementation of single linked list, Operations in the singly linked list, stack and queue as a linked list, circularly linked list, doubly linked list, circularly doubly linked list, Application of linked list: polynomial representation and addition, garbage collection      |                                      |                    |
| Unit 8   | <b>Tree:</b> Basic terminology, binary tree, binary tree representation, complete binary tree, extended binary tree, array and linked list representations, traversing binary tree, threaded binary tree, binary search tree, Operations on BST, AVL tree, Operations on AVL tree, B-tree Insertion and deletion in B tree. |                                      |                    |
| Unit 9   | <b>Graph:</b> Basic terminology Graph representation Depth first search, breadth first search, topological sort, connected components, spanning tree, minimum cost spanning tree, Kruskal's and prim's algorithm, Shortest path algorithms: Bellman Ford Algorithm, Dijkstra's algorithm, Floyd-Warshall algorithm.         |                                      |                    |
| <b>Block 4</b>   | <b>BLOCK- 4</b>   |                                      |                    |
| Unit 10  | <b>Searching and sorting:</b> Sequential search, binary search, comparison and analysis, Selection sort, Bubble sort, Insertion sort, Heap sort, Quick Sort, Merge sort, Shell sort, radix sort.  |                                      |                    |
| Unit 11  | <b>Hashing:</b> Hash table, hash function, collision resolution strategies, hash table implementation.  |                                      |                    |
| Unit 12  | <b>File Structure:</b> Terminology, File organization, Sequential files, Direct File organization, Indexed Sequential file organization.  |                                      |                    |

**Suggested Readings:**

1. E Horowitz and S. Sahni: Fundamentals of Data Structures in C, Second Edition, Universities Press, Hyderabad.
2. R.L. Kruse: Data Structures & Program Design in C, PHI.

**Suggested online courses (MOOCs)**

1. Programming and Data Structure, IIT Kharagpur by Dr. P.P.Chakraborty  
<https://nptel.ac.in/courses/106105085>
2. NOC:Programming and Data structures (PDS), IIT Madras by Dr. N S. Narayanaswamy  
<https://nptel.ac.in/courses/106106130>
3. NOC:Programming, Data Structures and Algorithms, IIT Madras by Prof. Hema A Murthy, Dr. N S. Narayanaswamy, Prof. Shankar Balachandran  
<https://nptel.ac.in/courses/106106127>
4. Data Structures And Algorithms, IIT Delhi by Prof. Naveen Garg  
<https://nptel.ac.in/courses/106102064>

This course can be opted as an elective by the students of following subjects: **B.Sc. in computer science, B.Sc. in Statistics, BCA**

Suggested equivalent online courses (MOOCs) for credit transfer: N.A

|--|--|--------------------|
| Programme: <b>Master of Science</b>  | Year: <b>First</b>                               | Semester: <b>I</b> |
| <b>Subject: Computer Science</b>   |  |                    |
| Course Code: <b>MCS-104P</b>   | Course Title: <b>Data Structures and C++ Lab</b> |                    |
| Course Objectives: The aim of this course is to enhance programming skills while improving their practical knowledge of data structures. It strengthens the practical ability to apply suitable data structures for real-time applications.  |  |                    |
| Course Outcomes:<br><b>CO1</b> Implement the abstract data type and reusability of a particular data structure.<br><b>CO2</b> Implement linear data structures such as stacks, queues using array and linked list.<br><b>CO3</b> Understand and implements non-linear data structures such as trees, graphs.<br><b>CO4</b> Implement various kinds of searching, sorting and traversal techniques and know when to choose which technique.   |  |                    |
| Credits: <b>04</b>   | Type of Course: <b>Practical Lab</b>             |                    |
| Max. Marks: <b>100</b>   | Min. Passing Marks: <b>36</b>                    |                    |
| <b>List of Practical in Data Structures Lab with C++:</b>  |  |                    |
| <ol style="list-style-type: none"> <li>1. Implementation of Stacks, Queues (using both arrays and linked lists).</li> <li>2. Implement a program to evaluate a given postfix expression using stacks.</li> <li>3. Implement the following operations on singly and circular linked list: i) Creation ii) Insertion iii) Deletion iv) Traversal</li> <li>4. Implementation of operations on binary tree (delete entire tree, copy entire tree, mirror image, level order, search for a node etc.)</li> <li>5. Implementation of the following operations on binary search tree (BST): (a) Minimum key (b) Maximum key (c) Search for a given key (d) Delete a node with given key</li> <li>6. Implementation of graph traversals by applying: (a) BFS (b) DFS</li> <li>7. Implement the following algorithms to find out a minimum spanning tree of a simple connected undirected graph: (a) Prim's algorithm (b) Kruskal's algorithm</li> <li>8. Implement Dijkstra's algorithm for solving single source shortest path problem.</li> <li>9. Implementation of recursive and non-recursive functions to perform the following searching operations for a key value in a given list of integers: i) Linear search ii) Binary search</li> <li>10. Implement the following sorting algorithms: a) Bubble sort b) Selection sort c) Insertion sort (d) Merge sort (e) Quick sort (f) Heap sort</li> <li>11. Write a C++ program to illustrate the concept of class with method overloading.</li> <li>12. Write a C++ Program that reads a line of integers, and then displays each integer, and the sum of all the integers (Use String Tokenizer class of java.util)</li> <li>13. Write a C++ program to illustrate the concept of Single level and Multi level Inheritance.</li> <li>14. Write a C++ program to demonstrate the Interfaces &amp; Abstract Classes.</li> <li>15. Write a C++ program to implement the concept of exception handling.</li> </ol> |  |                    |
| <b>Suggested Readings:</b>   |  |                    |
| <ol style="list-style-type: none"> <li>1. Virtual Lab on Data Structure: <a href="https://ds1-iiith.vlabs.ac.in/">https://ds1-iiith.vlabs.ac.in/</a></li> </ol>  |  |                    |

|  |  |                    |
|--|--|--------------------|
| Programme: <b>Master of Science</b>  | Year: <b>First</b>   | Semester: <b>I</b> |
| Subject: <b>Computer Science</b>   |  |                    |
| Course Code: <b>PGBR-01</b>  | Course Title: <b>Basics in Research</b>  |                    |
| Course Objectives: <ul style="list-style-type: none"> <li>➤ To discuss the <i>Sources of information</i></li> <li>➤ To discuss about <i>journal abbreviations</i></li> <li>➤ To discuss the <i>monographs, dictionaries, text books etc.</i></li> </ul>  |  |                    |
| Course Outcomes: <p><b>CO1</b> Able to learn about how to get information of research.</p> <p><b>CO2</b> Learn about journal and article and research manuals</p> <p><b>CO3</b> Able to know the role of primary, secondary and tertiary sources of information.</p> <p><b>CO4</b> Gain knowledge about abstract and citation index.</p> <p><b>CO5</b> Also know about digital web resources</p>   |  |                    |
| Credits: <b>04</b>   | Type of Course: <b>Core</b>  |                    |
| Max. Marks: <b>100</b>   | Min. Passing Marks: <b>36</b>  |                    |
| <b>(Syllabi should be framed block wise/unit wise; No of blocks and units may change)</b>  |  |                    |
| Unit I   | <b>Literature Survey</b><br>Sources of information, need for reviewing literature, primary-secondary and tertiary sources, journals, journal abbreviations, abstracts, current titles, reviews, monographs, dictionaries, text books, current contents, patents. subject index, substance index, author index, formula index and other indices with examples. Digital: Web resources, E-journals, journal access, TOC alerts. Hot articles: Citation index, UGC infonet, E-books, Impact Factors, Search engines- Google scholar, Wiki-databases, Science Direct, SciFinder, Scopus. |                    |
| Unit II  | <b>Ethics and IPR</b><br>Regulatory bodies, practices and compliances, Good Laboratory Practices (GLP), Research Ethics and Misconduct, Patents, Copyrights, Trademarks, Product and process of patenting, Patent Treaties and Convention, process of filing patent, database of patent, search and retrieval.   |                    |
|  | <b>Suggested Text Book Readings:</b> <ol style="list-style-type: none"> <li>1. Use different searching engine to get relevant information (Google scholar, chemical industry, Wiki-databases, chem Spider, Science Direct, SciFinder, Scopus.</li> <li>2. Access to different online research library and research portal (Web resources, E-journals, journal access, TOC alerts)</li> </ol>   |                    |
| <p><b>Note:-</b> In this paper, learner itself study the UNITS and prepare a report.</p> <p><b>Instructions for submitting the reports</b></p> <ol style="list-style-type: none"> <li>1. 02 copies of Report will be submitted by learner to the study center.</li> <li>2. The evaluation will be in 100 marks.</li> <li>3. Internal assessment will be done by the counsellor of the study center under 30 percent marks and upload the marks to the university portal which is provided by examination department.</li> <li>4. The coordinator of study center will send a one copy of report along with the print copy of uploaded internal marks (30 marks) to the concerned school for external evaluation. The external evaluation will be in 70 marks within the stipulated date.</li> <li>5. The concerned school will send the external marks of evaluated reports to the examination department and also upload it on university portal.</li> <li>6. The guideline for preparing report is available at link:<br/> <a href="http://14.139.237.190/vc_school_main_page.php?slm=1&amp;contid=206">http://14.139.237.190/vc_school_main_page.php?slm=1&amp;contid=206</a> </li> </ol> |  |                    |

| Programme: <b>Master of Science</b>   |  | Year: <b>First</b>                         | Semester: <b>II</b> |
| <b>Subject: Computer Science</b>  |  |  |                     |
| Course Code: <b>MCS-106N</b>  |  | Course Title: <b>Computer Organization</b> |                     |
| Course Objectives: The course aim to provide understanding the basic structure of a digital computer and to study the operations of internal components.  |  |  |                     |
| Course Outcomes:<br><b>CO1</b> Assess basics components of computer hardware.<br><b>CO2</b> Understand how Boolean algebra is related to designing computer logic, through simple combinational and sequential logic circuits.<br><b>CO3</b> Realize a simple computer with hardware design including data format, instruction format, instruction set, addressing modes, bus structure, input/output, memory, Arithmetic/Logic unit, control unit, and data, instruction and address flow.<br><b>CO4</b> Design combinational and sequential logic circuits, flip-flops, counters, shift registers, adders, subtractor, multiplexer, demultiplexer, Arithmetic/Logic unit.<br><b>CO5</b> Develop concept of memory unit and input/output architecture.<br><b>CO6</b> Build basics of Instruction Set Architecture (ISA). |  |  |                     |
| Credits: <b>04</b>  |  | Type of Course: <b>Core</b>                |                     |
| Max. Marks: <b>100</b>  |  | Min. Passing Marks: <b>36</b>              |                     |
| <b>Block 1</b>  | <b>Introduction to Digital Electronics</b>   |  |                     |
| Unit 1  | <b>Introduction to number system:</b> binary, octal, hexadecimal, Inter-conversion to different number system.   |  |                     |
| Unit 2  | <b>Boolean algebra and Logic Gates:</b> De Morgan's theorem, Boolean Identity. OR, AND NOT NAND, NOR and Ex OR gates and their Truth Tables, Positive and Negative logic.  |  |                     |
| Unit 3  | <b>Reduction Techniques:</b> Standard representation of Boolean expressions, SOP and POS forms, Combinational and sequential circuits, Minterm and Maxterm expressions, Map reduction techniques, K- tap. Code Conversions: Binary to Gray, BCD to decimal etc.  |  |                     |
| Unit 4  | <b>Binary Arithmetic:</b> Half and Full Adder, Subtractor, Multiplexer, Demultiplexer, Decoder, Encoders, Comparators.   |  |                     |
| Unit 5  | <b>Sequential Circuit:</b> Flip Flops: S/R, J/K, D and T Latches, Digital Counters, Registers.   |  |                     |
| <b>Block 2</b>  | <b>Basic building blocks</b>   |  |                     |
| Unit 6  | <b>Building blocks:</b> I/O, Memory, ALU and its components, Control Unit and its functions  |  |                     |
| Unit 7  | <b>Instruction</b> — word, Instruction and Execution cycle, branch, skip, jump and shift instruction, Operation of control. registers; Controlling of arithmetic operation.  |  |                     |
| Unit 8  | <b>Addressing techniques</b> — Direct, Indirect, Immediate, Relative, Indexed addressing and paging. Registers —Indexed, General purpose, Special purpose, overflow, carry, shift, scratch, Memory Buffer register; accumulators; stack pointers; floating point; status information and buffer registers. |  |                     |
| <b>Block 3</b>  | <b>Memory &amp; I/O</b>  |  |                     |
| Unit 9  | <b>Memory:</b> Main memory, RAM, static and dynamic, ROM, EPROM, EEPROM, EAROM, Cache and Virtual memory.  |  |                     |
| Unit 10   | <b>I/O System:</b> Buses, Interfacing buses, Bus formats- address, data and control, Interfacing keyboard, display, auxiliary storage devices and printers.  |  |                     |
| Unit 11   | <b>Introduction to Microprocessors and microcontrollers;</b> Introduction to 8085 microprocessor, example of few instructions to understand addressing techniques, differences between microprocessors and microcontrollers. Interlocution to different processor families.                                |  |                     |
| <b>Suggested Readings:</b>  |  |  |                     |
| 1. William Stallings, "Computer Organization and Architecture", 9th Edition, PHI,2012   |  |  |                     |

2. M. Morris Mano, Michael D. Ciletti, "Digital Design", 4th Edition, Pearson Education, 2011.
3. Hennessy J. and Patterson D., "Computer Architecture: A Quantitative Approach", 5th Edition, Morgan Kaufmann, 2011.

| Programme: <b>Master of Science</b>  |   | Year: <b>First</b>  | Semester: <b>II</b> |
| <b>Subject: Computer Science</b>   |   |   |                     |
| Course Code: <b>MCS-108N</b>   |   | Course Title: <b>Data Communication and Computer Networks</b> |                     |
| Course Objectives: This course offers students an understanding of how machines are connected in a network and how data communication takes place between machines at various locations. It provides basic concepts of data communication, layered model, protocols and interworking between computer networks and switching components in telecommunication systems.  |   |   |                     |
| Course Outcomes:<br><b>CO1</b> Explain basics of OSI Reference Model and TCP/IP Model.<br><b>CO2</b> Understand basics of computer networks and various network topologies.<br><b>CO3</b> Understand various protocol of data link layer for flow and error control such as Stop and wait protocols, One bit sliding window protocol, Using Go-Back N.<br><b>CO4</b> Describe different types of network devices Hub, Bridges, Switch, Gateways, and Routers along with their working.<br><b>CO5</b> Realize how packet is being transferred from source to destination PC.<br><b>CO6</b> Understand the knowledge of network management and communication switching techniques. |   |   |                     |
| Credits: <b>04</b>   |   | Type of Course: <b>Core</b>                                   |                     |
| Max. Marks: <b>100</b>   |   | Min. Passing Marks: <b>36</b>                                 |                     |
| <b>Block 1</b>   | <b>Computer Networks Basics</b>   |   |                     |
|  | Introduction: Layered network architecture, Review of ISO-OSI Model. Data Communication techniques: Pulse code Modulation, (PCM), Data modems, Multiplexing techniques –Frequency-Division, Time-Division, Time-Division Transmission Media-Wires, Cables, Radio, Links, Fiber-Optic Links.<br>Asynchronous Transfer Mode (ATM); Cell Format, Layovers in ATM, Class 1,2,3,4 Traffic Random Access Data Networks, Concept of Random Access, Pure ALOHA; Throughput Characteristics Slotted ALOHA, Throughputs for Finite and Infinite, Population S- ALOHAS. MARKOV Chain Model for S- ALOHAS. Throughputs for Finite and Infinite, Population S- ALOHAS. MARKOV Chain Model for S-ALOHA. |   |                     |
| <b>Block 2</b>   | <b>Data Link layer</b>  |   |                     |
|  | Local Area Networks (LANs): IEEE 802.4 and 802.5 Protocols. Performance of Ethernet and Token ring protocols, FDDI Protocol, Distributed Queues Dual Bus (DQDB) Protocol. Data Link Protocols: Stop and Wait Protocols: Noise Free and Noisy Channels Performance and Efficiency, Verification of protocols using Finite State Marching. HDLC Data Link Protocol.   |   |                     |
| <b>Block 3</b>   | <b>Network &amp; Transport Layer</b>  |   |                     |
|  | Network Layer Protocols: Design issue: Virtual circuits and Datagram.<br>Integrated Services Digital Network: Interfaces, Devices, Channel Structure. Dead Locks and their avoidance Network Layer in ATM, Internetworking: Bridges, Routers and Gateways, Internet Architecture and Addressing.<br>Transport Layer Protocols: Design issues: Quality of Services, Primitives Connection Management: Addressing, Connection Establishment and Releases, Use of Timers, Flow Control and Buffering, Multiplexing, Crash Recovery.  |   |                     |
| <b>Block 2</b>   | <b>Upper Layer Protocols</b>  |   |                     |

|   |  |
|---|--|
|   | <p>Routing Algorithms: Optimality Principle, Shortest Path Routing- Dijkstra, Bellman – Ford and Floyd- War shall Algorithm.</p> <p>Elements of TCP/IP Protocol: User Datagram Protocol Connection Management, Finite State Machine.</p> <p>Session Layer Protocols: Dialog Management, Synchronization, OSI Session Primitives Connection Establishment, Presentation and Application Layer Protocols: Presentation Concepts NMP- Abstract Syntax Notation-1 (ASN-1), Structure of Management, Management Information Base.</p> |

|--|--|--|---------------------|
| Programme: <b>Master of Science</b>  |  | Year: <b>First</b>                               | Semester: <b>II</b> |
| <b>Subject: Computer Science</b>   |  |  |                     |
| Course Code: <b>MCS-109N</b>   |  | Course Title: <b>Data Base Management System</b> |                     |
| <p>Course Objectives: Today databases form the backbone of all major applications – internet, banking, product &amp; sales etc. Relational Database Management Systems (DBMS) have long formed the basis for many leading databases such as Oracle, Microsoft SQL Server and MySQL. This course aim to provide a common set of models and design paradigms which includes:</p> <ul style="list-style-type: none"> <li>➤ Data models, conceptualize and depict a database system using ER diagram.</li> <li>➤ Internal storage structures in a physical DB design.</li> <li>➤ Database normalization technique that organizes the data within a database in the most efficient manner possible.</li> <li>➤ Fundamental concepts of transaction processing techniques.</li> </ul>  |  |  |                     |
| <p>Course Outcomes:</p> <p><b>CO1</b> Students can explain the role of a database management system, basic database concepts, including the structure and operation of the relational data model.</p> <p><b>CO2</b> Apply logical database design principles, including E-R/EE-R diagrams, conversion of ER diagrams to relations.</p> <p><b>CO3</b> Describe the concepts of integrity constraints, relational algebra, relational domain &amp; tuple calculus, data normalization.</p> <p><b>CO4</b> Construct simple and moderately advanced database queries using Structured Query Language (SQL).</p> <p><b>CO5</b> Understand and apply Database Normalization to remove the duplicate data and database anomalies from the relational table</p> <p><b>CO6</b> Understand the concept of a database transaction including concurrency control, backup and recovery.</p> |  |  |                     |
| Credits: <b>04</b>   |  | Type of Course: <b>Core</b>                      |                     |
| Max. Marks: <b>100</b>   |  | Min. Passing Marks: <b>36</b>                    |                     |
| <b>Block 1</b>   | <b>Basic concepts of DBMS</b>  |  |                     |
| Unit 1   | <b>Introduction: Database Management System, Examples, Characteristics of the Database Approach, Advantage of using a Database Approach. Database System concepts and Architecture, Data Models, Schemes and Instances, DBMS Architecture and Data independence, Database Languages, Procedural and Non-procedural languages and Interfaces. Database System Environment, Classification of Database Management Systems.</b>           |  |                     |
| Unit 2   | <b>ER Model: Database Modeling using the ER Model., Using High-Level conceptual Data Models for Database design, an example Database Application, Entity types, Entity Sets, Attributes and keys, Relationships, Relationship types, roles and Structural Constraints., Weak Entity types, Refining the ER Design for the Company Database, ER Diagrams, naming conventions and design Issues, Conversion of ER Diagram to tables.</b> |  |                     |
| Unit 3   | <b>Relational Data Model: Basic Relational data model Concepts, Relational Databases and Relational Database Schemas, Relational Model Constraints, update Operations and Dealing with Constraint Violations</b>   |  |                     |
| <b>Block 2</b>   | <b>Query Language and Database Design Concepts</b>   |  |                     |
| Unit 4   | <b>Relational Algebra: Relational Model Concepts, Relational concepts and Relational Database Schemas, Update Operation and Dealing with Constraints Violations, Relational Database Design, Using ER-to-Relational Mapping.</b>   |  |                     |
| Unit 5   | <b>Structured Query language: Data definition, Constraints and Schema changes in SQL 2, Basic Quires in SQL, More Complex SQL Quires, Insert, Delete and Update Statements in SQL, views (Virtual Tables) in SQL, Specifying general constraints as Assertion features of SQL. Integrity constraints, Triggers, Functional dependencies.</b>   |  |                     |

|  |   |
|--|---|
| Unit 6   | <b>Functional Dependency Theory: Functional</b> Dependencies and Normalization for Relational Database, Informal Design Guidelines for Schemes, Functional Dependencies.  |
| Unit 7   | <b>Normalization:</b> Normal Forms based on Primary keys, General Definitions of Second and Third Normal forms, Boyce Codd Normal form, Relational Database Design Algorithms and Further Dependencies, Algorithms for Relational Database Schema Design, Multi-valued Dependencies and Fourth Normal Form, Join Dependencies and Fifth Normal Form, Inclusion Dependencies, Other Dependencies and Normal Forms.   |
| <b>Block 3</b>   | <b>Transaction Management &amp; Emerging Databases</b>  |
| Unit 8   | <b>Transaction Processing Concepts:</b> Introduction to Transaction Processing, Transaction and System Concept, Desirable properties of Transactions, Scheduling and Recoverability, Serializability of Scheduling, Transaction Support in SQL, Concurrency control techniques, Concurrency techniques for concurrency control, concurrency control based on timestamp based protocol, validation based protocol, deadlock handling, Database Recovery Techniques based on Immediate Update, Failure classification, Shadow Paging, Log based recovery, failure with loss of Nonvolatile Storage. |
| Unit 9   | Emerging Trends in DBMS: Emerging Trends in DBMS: Introduction to object-oriented Database Management System, Introduction to client/Server Database, Introduction to Distributed Database, Introduction to Knowledge Databases.  |
| <b>Suggested Readings:</b>   |   |

|   |  |                     |
|---|--|---------------------|
| <b>Course prerequisites:</b> To study this course, a student must have qualified graduation with Mathematics.   |  |                     |
| <b>Programme:</b> M.Sc.   | <b>Year:</b> I                           | <b>Semester:</b> II |
| <b>Subject:</b> Computer Science  |  |                     |
| <b>Course Code:</b> PGMP-02   | <b>Course Title:</b> <i>Mini Project</i> |                     |
| <b>Course Objectives:</b> In the second semester of Masters the main objectives of the exposure of students towards the project is to elevate their understanding into the applications areas of Mathematics. This course will develop their analytical ability, will provide them an apt exposure to work in any research group, and will motivate them to execute research in the area of their interest in Mathematical sciences.  |  |                     |
| <b>Course Outcomes:</b>   |  |                     |
| <b>CO1:</b> Students will be able to plan and strategize a scientific problem, and implement it within a reasonable time frame.   |  |                     |
| <b>CO2:</b> It is expected that after completing this project dissertation, students will learn to work independently and how to keep accurate/readable record of assigned project.   |  |                     |
| <b>CO3:</b> In addition, students will be able to know the library search and handle the data in a meaningful way.  |  |                     |
| <b>CO4:</b> Subsequently, the students should be able to critically examine research articles, and improve their scientific writing/communication skills and power point presentation.  |  |                     |
| <b>Credits:</b> 4   | <b>Type of Course:</b> Core              |                     |
| <b>Max. Marks:</b> 100  | <b>Min. Passing Marks:</b> 36            |                     |
| <b>Note:</b> Students shall make mini project on selected topic of their own choice studied so far and prepare the report.  |  |                     |
| <b>Instructions</b>   |  |                     |
| <ol style="list-style-type: none"> <li>02 copies of Report will be submitted by learner to the study center.</li> <li>The evaluation will be in 100 marks.</li> <li>Internal assessment will be done by the counsellor of the study center under 30 percent marks and upload the marks to the university portal which is provided by examination department.</li> <li>The coordinator of study center will send a one copy of report along with the print copy of uploaded internal marks (30 marks) to the concerned school for external evaluation. The external evaluation will be in 70 marks within the stipulated date.</li> <li>The concerned school will send the external marks of evaluated reports to the examination department and also upload it on university portal.</li> <li>The guideline for preparing report is available at link:<br/> <a href="http://14.139.237.190/vc_school_main_page.php?slm=1&amp;contid=206">http://14.139.237.190/vc_school_main_page.php?slm=1&amp;contid=206</a> </li> </ol> |  |                     |
| <b>Suggested Text Book Readings:</b>  |  |                     |
| <ol style="list-style-type: none"> <li>Use different searching engine to get relevant information (<i>Google scholar, Wiki-databases, Science Direct, SciFinder, Scopus, and YouTube.</i>)</li> <li>Access to different online research library and research portal (<i>Web resources, E-journals, journal access, TOC alerts</i>)</li> </ol>   |  |                     |

|  |   |  |                      |
|--|---|--|----------------------|
| Programme: <b>Master of Science</b>  |   | Year: <b>Second</b>                                    | Semester: <b>III</b> |
| <b>Subject: Computer Science</b>   |   |  |                      |
| Course Code: <b>MCS-111N</b>   |   | Course Title: <b>Design And Analysis Of Algorithms</b> |                      |
| Course Objectives: This course provide the common paradigms to design efficient algorithms for real world problem solving. It gives an understanding of how to analyze the asymptotic performance of algorithm; write rigorous correctness proofs for algorithms; important algorithmic design paradigms and methods of analysis; efficient algorithms in common engineering design situations.  |   |  |                      |
| Course Outcomes:<br><b>CO1</b> Understand that various problem solving methods exist such as; iterative technique, divide and conquer, dynamic programming, greedy algorithms.<br><b>CO2</b> Analyze the strengths and weaknesses of an algorithm theoretically as well as practically.<br><b>CO3</b> Identify and apply an appropriate technique to design an efficient algorithm for simple problems.<br><b>CO4</b> Demonstrate correctness and efficiency of the algorithm.<br><b>CO5</b> Apply various searching and sorting algorithms. |   |  |                      |
| Credits: <b>04</b>   |   | Type of Course: <b>Core</b>                            |                      |
| Max. Marks: <b>100</b>   |   | Min. Passing Marks: <b>36</b>                          |                      |
| <b>Block 1</b>   | <b>Introduction and Design Strategies-I</b>   |  |                      |
| Unit 1   | <b>Introduction:</b> Algorithm, Psuedo code for expressing algorithms, Performance Analysis-Space complexity, Time complexity, Growth of functions: Asymptotic Notation, Recurrences: substitution method, master method.   |  |                      |
| Unit 2   | <b>Divide and Conquer:</b> General method, applications-Binary search, Finding the maximum and minimum, Quick sort, Heapsort, Strassen's Matrix Multiplication.   |  |                      |
| Unit 3   | <b>Sorting in Linear Time:</b> Lower bounds for sorting, Counting sort, Radix sort, Bucket sort, Medians and Order Statistics, Minimum and maximum.   |  |                      |
| <b>Block 2</b>   | <b>Algorithm Design Strategies-II</b>   |  |                      |
| Unit 4   | <b>Greedy method:</b> General method, applications- Knapsack problem, Job sequencing with deadlines, optimal two way merge patterns, Huffman codes, Minimum cost spanning trees: Prims and Kruskal's algorithm, Single source shortest paths: The Bellman-Ford algorithm, Dijkstra's algorithm. |  |                      |
| Unit 5   | <b>Dynamic Programming:</b> General method, applications, capital budgeting problem, Multistage graphs, Matrix chain multiplication, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem.  |  |                      |
| <b>Block 3</b>   | <b>Algorithm design strategies &amp; Completeness</b>   |  |                      |
| Unit 6   | <b>Graph Algorithms:</b> Introduction, representation of graphs, Breadth first search, depth first search, topological sort, strongly connected component, flow networks, ford-fulkerson method.  |  |                      |
| Unit 7   | <b>Backtracking:</b> General method, applications, 8-queen problem, sum of subsets problem, graph coloring, Hamiltonian cycles.   |  |                      |
| Unit 8   | <b>Branch-And-Bound:</b> The method, travelling salesperson problem, 15 puzzle problem.   |  |                      |
| Unit 9   | <b>NP-Hard and NP-Complete problems:</b> Basic concepts, non-deterministic algorithms, NP - Hard and NP Complete classes, satisfiability problem, reducibility.   |  |                      |
| <b>Suggested Readings:</b>   |   |  |                      |

| Max. Marks: <b>100</b>  |  | Min. Passing Marks: <b>36</b>         |                      |
| <b>Block 1</b>  | <b>Object Oriented Methodology and Java</b>  |                                       |                      |
| Unit 1  | <b>Object Oriented Programming:</b> Paradigms of Programming languages, Evolution of Object-Oriented Methodology, Basic Concepts of OO Approach, Comparison of object oriented and procedure - oriented Approaches, Benefits of OOPS, Applications of OOPS. Classes and objects, Abstraction and Encapsulation, Inheritance, Method overriding and Polymorphism. |                                       |                      |
| Unit 2  | <b>Java Language Basics:</b> Introduction to Java, Primitive Data Type and Variables, Java Operators.  |                                       |                      |
| Unit 3  | <b>Expressions Statements and Arrays:</b> Expressions, Statements, Control Statements, Selection Statements, Iterative Statements, Jump statements, Arrays.  |                                       |                      |
| <b>Block 2</b>  | <b>Object oriented concepts and Exceptions Handling</b>  |                                       |                      |
| Unit 4  | <b>Class and objects:</b> Class Fundamentals, Introducing Methods, this Keyword, Using objects as Parameters, Method overloading, Garbage collection, the finalize () Method.  |                                       |                      |
| Unit 5  | <b>Inheritance and Polymorphism:</b> Inheritance Basics, Access, Multilevel, inheritance, Method overriding Abstract classes, Polymorphism, Final Keyword.   |                                       |                      |
| Unit 6  | <b>Packages and interfaces:</b> Package, Accessibility of Packages, using Package members, Interfaces, Implementing interfaces, interface and Abstract classes, Extends and Implements together.   |                                       |                      |
| Unit 7  | <b>Exceptions Handling:</b> Exception, Handling of Exception, Types of Exceptions, Throwing, Exceptions, writing Exception subclasses.   |                                       |                      |
| <b>Block 3</b>  | <b>Multithreading, I/O, and Strings Handling</b>   |                                       |                      |
| Unit 8  | <b>Multithreaded Programming:</b> Multithreading, The Main thread, JAVA Thread Model, Thread Priorities, Synchronization in JAVA, Inter thread Communication.  |                                       |                      |
| Unit 9  | <b>I/O In Java:</b> I/O Basics, Streams and stream, Classes, the predefined streams, Reading from and writing to console, reading and writing files, the transient and volatile Modifiers, using instance of Native Methods.   |                                       |                      |
| Unit 10   | <b>Strings and Characters:</b> Fundamental of Characters and Strings, the String class, String operations, Data Conversion using value of () Methods, Strings Buffer and Methods.  |                                       |                      |
| Unit 11   | <b>Exploring Java I/O:</b> Java I/O classes and interfaces, Stream classes, Text streams, Stream Tokenizer, Serialization, Buffered stream, print stream, Random Access file.  |                                       |                      |
| <b>Block 4</b>  | <b>Graphics and user interfaces</b>  |                                       |                      |
| Unit 12   | <b>Applets:</b> The applet class, Applet architecture, An applet Skeleton: Initialization and Termination, Handling events, HTML Applet TAG.   |                                       |                      |

|   |   |
|---|---|
| Unit 13   | <b>Graphics and user interfaces:</b> Graphics contests and Graphics objects, user interface components, Building user interface with AWT, Swing - Based GUI, Layouts and layouts and layout Manager, Container. |
| Unit 14   | <b>Networking Features:</b> Socket overview, reserved parts and proxy servers, Internet Addressing: Domain Naming Services (DNS), Java and The Net: URL, TCP/IP Sockets, Datagrams.                             |

| Programme: <b>Master of Science</b>  |   | Year: <b>Second</b>                   | Semester: <b>III</b> |
| <b>Subject: Computer Science</b>   |   |                                       |                      |
| Course Code: <b>MCS-113N</b>   |   | Course Title: <b>Operating System</b> |                      |
| Course Objectives: The course will introduce Operating Systems (OS), their design and implementation. We will discuss the goals of an OS and some successful and not-so-successful OS designs. We will also discuss the following OS services in detail: thread scheduling, security, process management, memory management, virtual memory, and disk scheduling.  |   |                                       |                      |
| Course Outcomes:<br><b>CO1</b> Analyze & classify different types of operating system<br><b>CO2</b> Understand the working of Operating system<br><b>CO3</b> Interpret concepts of thread scheduling, process management, memory management, virtual memory, and disk scheduling.  |   |                                       |                      |
| Credits: <b>04</b>   |   | Type of Course: <b>Core</b>           |                      |
| Max. Marks: <b>100</b>   |   | Min. Passing Marks: <b>36</b>         |                      |
| <b>Block 1</b>   | <b>An Overview and Process Management</b>   |                                       |                      |
| Unit 1   | <b>Introduction:</b> Basic definitions, Batch processing, Multi-programming. Time sharing, multiprocessing; Structure and Functions of Operating System   |                                       |                      |
| Unit 2   | <b>Process and thread:</b> Process, Process states, State Transitions, Process Control Block, Context Switching, concept of thread, comparison between process and thread, Thread model, thread usage, implementing thread in kernel and user space.                              |                                       |                      |
| Unit 3   | <b>Process Scheduling:</b> Scheduler, Scheduling criteria, Preemptive and non-preemptive scheduling, Process Scheduling, Process scheduling algorithms.   |                                       |                      |
| Unit 4   | <b>Concurrent Process:</b> Process Interaction, Shared Data and Critical Section, Mutual Exclusion, Synchronization, Classical Problems of Synchronization, Semaphores, Monitors.   |                                       |                      |
| <b>Block 2</b>   | <b>Memory Management and Unix Case Study</b>  |                                       |                      |
| Unit 5   | <b>UNIT 5: Deadlock:</b> Concept of deadlock, necessary condition for deadlock, resource allocation graph, deadlock prevention, deadlock avoidance, Banker's algorithm, Deadlock detection, deadlock recovery.  |                                       |                      |
| Unit 6   | <b>UNIT 6: Memory management:</b> Address Binding, Dynamic Loading and Linking Concepts, Logical and Physical Addresses Contiguous and non-contiguous memory allocation, Paging, Segmentation, Virtual Memory, Demand Paging, Page fault, Page replacement algorithms, thrashing. |                                       |                      |
| Unit 7   | <b>UNIT 7: Secondary memory management:</b> Free Space management, Disk Structure, Disk Scheduling, Formatting, Swap space Management.  |                                       |                      |
| Unit 8   | <b>UNIT 8: Case Study of UNIX</b>   |                                       |                      |
| <b>Suggested Readings:</b>   |   |                                       |                      |

| <p><b>Note:</b> Students shall make dissertation on selected topic of their own choice studied so far and prepare the report.</p> <p><b>Instructions</b></p> <ol style="list-style-type: none"> <li>1. 02 copies of Report will be submitted by learner to the study center.</li> <li>2. The evaluation will be in 100 marks.</li> <li>3. Internal assessment will be done by the counsellor of the study center under 30 percent marks and upload the marks to the university portal which is provided by examination department.</li> <li>4. The coordinator of study center will send a one copy of report along with the print copy of uploaded internal marks (30 marks) to the concerned school for external evaluation and viva voce.</li> <li>5. The concerned school will send the external marks of evaluated reports to the examination department and also upload it on university portal.</li> <li>6. The guideline for preparing report is available at link:<br/> <a href="http://14.139.237.190/vc_school_main_page.php?slm=1&amp;contid=206">http://14.139.237.190/vc_school_main_page.php?slm=1&amp;contid=206</a> </li> </ol> |  |                     |

|   |   |  |                     |
|---|---|--|---------------------|
| Programme: <b>Master of Science</b>   |   | Year: <b>Second</b>                    | Semester: <b>IV</b> |
| <b>Subject: Computer Science</b>  |   |  |                     |
| Course Code: <b>MCS-116N</b>  |   | Course Title: <b>Computer Graphics</b> |                     |
| Course Objectives: The primary role of computer graphics is to render the digital content (0's and 1's) in a human-comprehensible form on the computer screen. This course introduces various object representation techniques along with 2D and 3D transformation, clipping, splines, objects modeling, colour modeling, lighting, textures and visible surface detection.   |   |  |                     |
| Course Outcomes:<br><b>CO1</b> Demonstrate an understanding of contemporary graphics hardware.<br><b>CO2</b> Draw graphics using line & polygon and ability to perform operations on computer graphics.<br><b>CO3</b> Understand and demonstrate geometrical transformations, Segment, Windowing and Clipping, Interaction.<br><b>CO4</b> Demonstrate Hidden Surfaces & Lines; Light, Colour & Shading; Curves and Fractals |   |  |                     |
| Credits: <b>04</b>  |   | Type of Course: <b>Core</b>            |                     |
| Max. Marks: <b>100</b>  |   | Min. Passing Marks: <b>36</b>          |                     |
| <b>Block 1</b>  | <b>Raster Graphics and Clipping</b>   |  |                     |
| Unit 1  | Introduction to Computer Graphics: What is Computer Graphics?, Application of Computer Graphics, Presentation Graphics, Painting and Drawing, Photo Editing, Scientific Visualization, Image Processing, Digital Art, Education, training, Entertainment and CAD Simulation, Animation and Games, Graphics Hardware, Input and Output Devices, Touch Panel, Light Pens, Graphic Tablets, Plotters, Film Recorders, Display Devices, Refreshing Display Devices: Raster-Scan, Random-Scan, Plasma Panel and LCD panels |  |                     |
| Unit 2  | Graphics Primitives: Points and Lines, Line-drawing Algorithms: DDA Algorithm, Bresenham's line Algorithm, Circle-generating Algorithm: Properties of Circles, Midpoint Circle of Algorithm, Polygon Filling Algorithm: Scan-Line   |  |                     |
| Unit 3  | 2-D Viewing and Clipping: Point Clipping, Line Clipping: Cohen-Sutherland Line Clippings, Cyrus-Beck Line Clipping Algorithm, Polygon Clipping: Sutherland Hodgman Algorithm, Windowing Transformation  |  |                     |
| <b>Block 2</b>  | <b>Transformations</b>  |  |                     |
| Unit 4  | 2-D and 3-D Transformations: Basic Transformations: Translation, Rotation, Scaling, Shear, Composite Transformations: Rotations about a point, Reflection about a line, Homogeneous Coordinate Systems, 3-D Transformations   |  |                     |
| Unit 5  | Viewing Transformation: Projections: Parallel Projection, Orthographic & Oblique Projections, Isometric Projections, Perspective Projections  |  |                     |
| <b>Block 3</b>  | <b>Modeling &amp; Rendering</b>   |  |                     |
| Unit 6  | Curves and Surfaces: Polygon Representation Methods: Polygon Surfaces, Polygon Tables, Plane Equations, Polygon Meshes, Bezier Curves and Surfaces: Bezier Curves, Properties of Bezier Curves, Bezier Surfaces, Surface of Revolution  |  |                     |
| Unit 7  | Visible – Surface Detection: Depth Buffer Method, Scan-Line Method, Area-Subdivision Method   |  |                     |
| Unit 8  | Polygon Rendering and Ray Tracing Methods: Illumination Model: Ambient Reflection, Diffuse Reflection, Specular Reflection, Shading: Gouraud Shading, Phong Shading, Ray Tracing: Basic Ray-Tracing Algorithm   |  |                     |
| <b>Suggested Readings:</b>  |   |  |                     |
| 2. J. D. Foley, A. Van Dam, S. K. Feiner and J. F. Hughes, Computer Graphics - Principles and Practice, Second Edition in C, Pearson Education, 2003.   |   |  |                     |
| 3. D. Hearn and M. Pauline Baker, Computer Graphics (C Version), Pearson Education, 2nd Edition, 2004.  |   |  |                     |

4. Edward Angel, Interactive Computer Graphics A Top-Down Approach with OpenGL 5<sup>th</sup> Edition, Addison-Wesley, 2008.
5. Prabat K Andleigh and KiranThakrar, "Multimedia Systems and Design", PHI, 2003.

**Suggested online courses (MOOCs)**

1. Computer Graphics, IIT Madras by Prof. Sukhendu Das  
<https://nptel.ac.in/courses/106106090>
2. Introduction to Computer Graphics, IIT Delhi by Prof. Prem K Kalra  
<https://nptel.ac.in/courses/106102065>
3. NOC:Computer Graphics, IIT Guwahati by Prof. Samit Bhattacharya  
<https://nptel.ac.in/courses/106103224>

This course can be opted as an elective by the students of following subjects: **B.Sc. (Computer Science) and BCA**

Suggested equivalent online courses (MOOCs) for credit transfer: N.A.

|  |   |  |                     |
|--|---|--|---------------------|
| Programme: <b>Master of Science</b>  |   | Year: <b>Second</b>                        | Semester: <b>IV</b> |
| <b>Subject: Computer Science</b>   |   |  |                     |
| Course Code: <b>MCS-114N</b>   |   | Course Title: <b>Multimedia Technology</b> |                     |
| Course Objectives: Today, Multimedia and web design technology play an essential role in education, agriculture, product launch, science and technology, corporate development and enhanced business opportunities. The increasing variety of hardware and software components in multimedia and website design has escalated the demand for human resources in these fields. This course is designed to inculcate required skills for these activities. |   |  |                     |
| Course Outcomes:   |   |  |                     |
| <b>CO1</b> Visualize scopes of multimedia and understand steps in creation of multimedia applications.   |   |  |                     |
| <b>CO2</b> Understand digital audio, Prepare audio required for a multimedia system and Speech synthesis and recognition concept.  |   |  |                     |
| <b>CO3</b> Analyze representation of video, how video work and different video formats.  |   |  |                     |
| <b>CO4</b> Describe different animation techniques and software used for animation.  |   |  |                     |
| <b>CO5</b> Understand various multimedia development and authoring tools.  |   |  |                     |
| <b>CO6</b> Know the different layers of network along with video conferencing technique.   |   |  |                     |
| Credits: <b>04</b>   |   | Type of Course: <b>Core</b>                |                     |
| Max. Marks: <b>100</b>   |   | Min. Passing Marks: <b>36</b>              |                     |
| <b>Block 1</b>   | <b>Introduction to Multimedia and Its Components</b>  |  |                     |
| Unit 1   | <b>Multimedia Technology:</b> Meaning & scope of Multimedia; Elements of Multimedia; Creating multimedia applications; Multimedia file & I/O functions; Multimedia data structures; Multimedia file formats; Multimedia Protocols   |  |                     |
| Unit 2   | <b>Multimedia Audio:</b> Digital sound; Audio compression & decompression; Companding; ADPCM compression; MPEG audio compression; True Speech; Special effects and Digital Signal Processing: Audio synthesis; FM synthesis; Sound blaster card; Special effect processors on sound cards; Wave table synthesis; MIDI functions; Speech synthesis & Recognition |  |                     |
| Unit 3   | <b>Multimedia Video:</b> Representation of Digital video; Video capture: Frame grabbing; Full motion video; Live video in a window; Video processor; Video compression & decompression; Standards for video compression & decompression; Playback acceleration methods  |  |                     |
| <b>BLOCK-2</b>   | <b>Multimedia Animation, Authoring Tools and Internet</b>   |  |                     |

|  |  |
|--|--|
| Unit 4   | <b>Creating Multimedia Animation:</b> Icon animation; Bit-map animation; Real-time vs Frame by Frame animation; Object modeling in 3D animation; Motion control in 3D animation; Transparency; Texture. Shadows, Anti-aliasing; Human modeling & Animation; Automatic motion control |
| Unit 5   | <b>Multimedia Authoring Tools:</b> Project editor; Topic editor; Hot-spot editor; Developing a multimedia title; Multimedia text authoring systems; Usage of authoring tools   |
| Unit 6   | <b>Multimedia on LANs &amp; Internet:</b> Multimedia on LAN; Fast modems & Digital networks for multimedia; High speed digital networks; Video conferencing techniques; Multimedia interactive applications on Internet: Future Directions.  |

| Programme: <b>Master of Science</b>  |  | Year: <b>Second</b>                                   | Semester: <b>IV</b> |
| <b>Subject: Computer Science</b>   |  |   |                     |
| Course Code: <b>MCS-119N</b>   |  | Course Title: <b>Information and Network Security</b> |                     |
| Course Objectives: This course aims to provide a basic understanding of the existing algorithms used to protect users online and understand some of the design choices behind these algorithms. The course offers a workable knowledge of the mathematics used in cryptology. The course emphasizes giving a basic understanding of previous attacks on cryptosystems to prevent future attacks.   |  |   |                     |
| Course Outcomes:<br><b>CO1</b> Identify information security goals, classical encryption techniques and acquire fundamental knowledge on the concepts of finite fields and number theory.<br><b>CO2</b> Understand, compare and apply different encryption and decryption techniques to solve problems related to confidentiality and authentication<br><b>CO3</b> Apply the knowledge of cryptographic checksums and evaluate the performance of different message digest algorithms for verifying the integrity of varying message sizes<br><b>CO4</b> Apply different digital signature algorithms to achieve authentication and create secure applications<br><b>CO5</b> Apply network security basics, analyze different attacks on networks and evaluate the performance of firewalls and security protocols like SSL, IPSec, and PGP.<br><b>CO6</b> Apply the knowledge of cryptographic utilities and authentication mechanisms to design secure applications. |  |   |                     |
| Credits: <b>04</b>   |  | Type of Course: <b>Core</b>                           |                     |
| Max. Marks: <b>100</b>   |  | Min. Passing Marks: <b>36</b>                         |                     |
| <b>Block 1</b>   | <b>Information security and Symmetric Ciphers</b>  |   |                     |
| Unit 1   | <b>Introduction:</b> History, what is Information Security; Characteristics of Information; Information Security Model; Components of an Information Security; Aspects of Information security: Security attacks, Security Mechanism, and Security Services (X.800), Model for Network Security. |   |                     |
| Unit 2   | <b>Classical Encryption Techniques: Historical</b> background, symmetric cipher model, Substitution techniques, Transposition techniques, steganography.   |   |                     |
| Unit 3   | <b>Block ciphers and DES:</b> Block cipher principles, Data encryption standard, strength of DES, differential and cryptanalysis, block cipher design principles, block cipher mode of operation.  |   |                     |
| Unit 4   | <b>Confidentiality Using Symmetric Ciphers:</b> Placement of encryption function, traffic confidentiality, key distribution, random number generation.   |   |                     |
| <b>Block 2</b>   | <b>Public key Encryption and Hash Functions</b>  |   |                     |
| Unit 5   | <b>Introduction to Number Theory:</b> Prime numbers, Fermat's and Euler's theorem, discrete logarithm  |   |                     |
| Unit 6   | <b>Public Key Cryptography:</b> Public-Key Cryptography Principles, RSA, Key Management: Diffi-Hellman key exchange.   |   |                     |
| Unit 7   | <b>Message Authentication and Hash Functions:</b> Authentication requirements, Authentication Functions, Message Authentication codes, Hash Functions, SHA-1, MD5.   |   |                     |
| Unit 8   | <b>Digital Signatures:</b> Digital signatures, Authentication protocols, Digital Signature standard  |   |                     |
| <b>Block 3</b>   | <b>Network Security Applications</b>   |   |                     |
| Unit 9   | <b>Authentication Applications:</b> Kerberos Motivation, X.509 authentication service  |   |                     |
| Unit 10  | <b>Electronic Mail Security:</b> PGP: PGP Notation, PGP Operational Description, S/MIME  |   |                     |
| Unit 11  | <b>IP Security:</b> IP Security Overview, IP Security Architecture, Authentication Header  |   |                     |
| Unit 12  | <b>Web Security:</b> Web Security Threats, Web Traffic Security Approaches, Overview of Secure Socket Layer and Transport Layer Security, Overview of Secure Electronic Transaction  |   |                     |
| <b>Block 4</b>   | <b>Intruders and Viruses</b>   |   |                     |
| Unit 13  | <b>Intruders:</b> Intruders, Intrusion Techniques, Password Protection, Password Selection Strategies, Intrusion Detection,  |   |                     |
| Unit 14  | <b>Malicious Programs:</b> Malicious Programs, Nature of Viruses, Types of Viruses, Macro Viruses, Antivirus Approaches  |   |                     |
| Unit 15  | <b>Firewall:</b> Firewall Characteristics, Types of Firewalls, Firewall Configuration  |   |                     |
| <b>Suggested Readings:</b>   |  |   |                     |

1. Douglas Stinson, "Cryptography Theory and Practice", 2nd Edition, Chapman & Hall/CRC.
2. B. A. Forouzan, "Cryptography & Network Security", Tata Mc Graw Hill.
3. W. Stallings, "Cryptography and Network Security", Pearson Education.

**Suggested online courses (MOOCs)**

| Programme: <b>Master of Science</b>   |   | Year: <b>Second</b>                       | Semester: <b>VI</b> |
| <b>Subject: Computer Science</b>  |   |   |                     |
| Course Code: <b>MCS-104N</b>  |   | Course Title: <b>Software Engineering</b> |                     |
| Course Objectives: Provide the current software engineering techniques and examine the software life-cycle, including software specification, design implementation, testing and maintenance. It presents software engineering methodologies for the development of Quality, cost-effective, schedule meeting software.   |   |   |                     |
| Course Outcomes:<br><b>CO1</b> Describe software engineering layered technology and process framework.<br><b>CO2</b> Introduces theories, models, and techniques that provide a basis for the software development life cycle.<br><b>CO3</b> Introduces software testing approaches including verification and validation, static analysis, reviews, inspections, and audits.<br><b>CO4</b> Understanding of the role of project management including planning, scheduling, risk management, etc.<br><b>CO5</b> Work as an individual and/or in team to develop and deliver quality software. |   |   |                     |
| Credits: <b>04</b>  |   | Type of Course: <b>Core</b>               |                     |
| Max. Marks: <b>100</b>  |   | Min. Passing Marks: <b>36</b>             |                     |
| Unit 1  | <b>Software Engineering Fundamentals:</b> Definition of Software, Software characteristics, Software Applications. Software Process: Software Process Models - Waterfall model, prototyping model, spiral model, incremental model, concurrent development model. Project management Concepts: The Management Spectrum - The People, The Product, The Process, The Project.   |   |                     |
| Unit 2  | <b>Software Process and Project Metrics :</b> Measures , Metrics and Indicators , Software measurement Size -Oriented Metrics , Function - Oriented Metrics , Extended Function point metrics Software Project Planning : Project Planning Objectives , Software Project Estimation , Decomposition Techniques - Problem Based Estimation Process Based Estimation ,Empirical Estimation Models- The COCOMO Model Risk Analysis and Management: Software risks, Risk identification, Risk Projection, Risk Refinement, Risk Mitigation , Monitoring and Management.   |   |                     |
| Unit 3  | <b>Software Quality Assurance:</b> Basic concepts- Quality, Quality Control, Quality Assurance, Cost of Quality, Software Quality Assurance (SQA), Formal Technical Review Software Configuration Management: Baselines, Software Configuration Items, The SCM Process, Version Control, Change Control, Configuration Audit, Status Reporting. Analysis Concepts and Principles: Requirements Elicitation for Software, Analysis Principles. The Information Domain, Modeling, Partitioning, Essential and Implementation Views, Specification: Specification Principles, Representation, The Software Requirement Specification (SRS) |   |                     |
| Unit 4  | <b>Design Concepts and Principles:</b> Design Principles, Design Concepts — Abstraction, Refinement, Modularity, Software Architecture, Control Hierarchy, Structural Partitioning, Data Structure. Software Procedure, Structure, Information Hiding, Effective Modular Design- Cohesion, Coupling Software Testing: Testing Objectives & principles, Unit Testing, Integration Testing (Top-Down Integration, Bottom. Up Integration, Regression Testing, Smoke Testing), Validation Testing (Alpha and Beta Testing), System Testing (Recovery Testing, Security Testing, Stress Testing, Performance Testing).                      |   |                     |
| Unit 5  | <b>Reengineering:</b> Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering CASE Tools: What is CASE, Building Blocks of CASE, A Taxonomy of CASE Tools, Integrated CASE Environments, The integration Architecture, The CASE Repository.   |   |                     |
| <b>Suggested Readings:</b>  |   |   |                     |

1. Mall, Rajib. Fundamentals of software engineering. PHI Learning Pvt. Ltd., 2018.
2. R.S. Pressman, Software Engineering – A Practitioner’s Approach, 6th Edition, TMH, 2013.
3. Ian Sommerville, Software Engineering, 8th Edition, Addison Wesley, 2009.
4. Pankaj Jalote, An Integrated Approach to Software Engineering, Narosa Publishing, 2010.

|---|---|--|---------------------|
| Programme: <b>Master of Science</b>   |   | Year: <b>Second</b>                        | Semester: <b>IV</b> |
| <b>Subject: Computer Science</b>  |   |  |                     |
| Course Code: <b>MCS-107N</b>  |   | Course Title: <b>Theory of Computation</b> |                     |
| Course Objectives: The aim of this course is to introduce students with the mathematical model of machines. The course familiarize students with the concept of formal language, their relationships and corresponding automaton. It builds core concepts to design grammars and recognizers for different formal languages; identify ambiguity in grammar. |   |  |                     |
| Course Outcomes:  |   |  |                     |
| <b>CO1</b> Understand what automata is and what its use are.  |   |  |                     |
| <b>CO2</b> Analyze regular grammar and design finite automata for various regular languages.  |   |  |                     |
| <b>CO3</b> Analyze context free grammar and design pushdown automata for different types of context free languages.   |   |  |                     |
| <b>CO4</b> Compare and analyze different languages, grammars and machines.  |   |  |                     |
| <b>CO5</b> Design Turing machine for unrestricted grammar (type 0).   |   |  |                     |
| <b>CO6</b> Understand undecidable problems that cannot be solved using computers.   |   |  |                     |
| Credits: <b>04</b>  |   | Type of Course: <b>Core</b>                |                     |
| Max. Marks: <b>100</b>  |   | Min. Passing Marks: <b>36</b>              |                     |
| <b>Block 1</b>  | <b>Regular Expression and Finite Automata</b>   |  |                     |
| Unit 1  | <b>Alphabet, Strings and Languages:</b> Set, Relations, Alphabet, Strings, Languages, Finite Representation of Languages, Chomsky Hierarchy   |  |                     |
| Unit 2  | <b>Finite Automata:</b> Finite State Systems, Basic Definitions Non-Deterministic finite automata (NFA), Deterministic finite automata (DFA), Equivalence of DFA and NFA, Finite automata with epsilon transitions, Removal of epsilon transitions. |  |                     |
| Unit 3  | <b>Regular Expressions:</b> Regular Expressions-Definition, Algebraic Laws of RE, Finite Automata and Regular expressions, Conversion from RE to FA, Conversion from FA to RE, Arden's Theorem.   |  |                     |
| Unit 4  | <b>Introduction to Machines:</b> Concept of basic Machine, Properties and limitations of FSM, Moore and mealy Machines, Equivalence of Moore and Mealy machines. Minimization of DFA.   |  |                     |
| Unit 5  | <b>Block 2 Context Free Grammar</b>   |  |                     |
| <b>Block 2</b>  | <b>Properties of Regular Language:</b> The Pumping Lemma for Regular Sets, Applications of the pumping lemma, Closure properties of regular sets.   |  |                     |
| Unit 6  | <b>Context Free Grammar:</b> Context Free Grammar (CFG)-Formal definition, sentential forms, leftmost and rightmost derivations, the language of CFG.   |  |                     |
| Unit 7  | <b>Normal Forms:</b> Simplifications of CFG's- Removal of Useless Symbols, Removal of epsilon and Unit Production, Normal Forms-CNF and GNF.  |  |                     |
| Unit 8  | <b>Context Free Languages (CFL):</b> Closure Properties of CFL, Decision Properties of CFL, Application of CFG, Pumping Lemma for CFL.  |  |                     |
| <b>Block 3</b>  | <b>Block 3 Pushdown Automata and Turing Machine</b>   |  |                     |
| Unit 9  | <b>Push Down Automata:</b> Formal Definition of Pushdown Automata, Pushdown Automata accepted by final state and empty state, Equivalence between CFG and PDA.  |  |                     |
| Unit 10   | <b>Turing Machine:</b> Turing Machine (TM) –Formal Definition and behavior, Transition diagram, Instantaneous Description, Language of a TM, Variants of TM, Universal Turing Machine, Halting Problem, Church Thesis.                              |  |                     |
| Unit 11   | <b>Undecidability:</b> Recursive enumerable, Undecidable Problem About Turing Machines, Unsolvable Problems.  |  |                     |
| <b>Suggested Readings:</b>  |   |  |                     |
| 1. Hopcroft and Ullman, "Introduction to Automata Theory, Languages and Computation", Pearson Education, 3rd edition, 2006  |   |  |                     |

2. Linz, Peter, and Susan H. Rodger. An introduction to formal languages and automata. Jones & Bartlett Learning, 2022.

**Suggested online courses (MOOCs)**

1. NOC:Introduction to Automata, Languages and Computation, IIT Kharagpur by Prof. Sourav Mukhopadhyay  
<https://nptel.ac.in/courses/106105196>
2. Formal Languages and Automata Theory, IIT Guwahati by Dr. Diganta Goswami, Dr. K.V. Krishna  
<https://nptel.ac.in/courses/111103016>
3. Theory of Automata, Formal Languages and Computation, IIT Madras by Prof. Kamala Krithivasan  
<https://nptel.ac.in/courses/106106049>
4. NOC:Theory of Computation, IIT Kanpur by Prof. Raghunath Tewari  
<https://nptel.ac.in/courses/106104148>

This course can be opted as an elective by the students of following subjects: **BCA, MCA**

Suggested equivalent online courses (MOOCs) for credit transfer: N.A

|---|--|--------------------------------------|---------------------|
| Programme: <b>Master of Science</b>   |  | Year: <b>Second</b>                  | Semester: <b>IV</b> |
| <b>Subject: Computer Science</b>  |  |                                      |                     |
| Course Code: <b>MCS-120N</b>  |  | Course Title: <b>System Software</b> |                     |
| Course Objectives: This course aims to illustrate the working of the various phases of a general-purpose compiler. It explains the principles involved in compiler design. It will cover all the basic components of a compiler, along with machine code generation and optimizations.  |  |                                      |                     |
| Course Outcomes:<br><b>CO1:</b> Understand design issues of a lexical analyzer and use of Lex tool<br><b>CO2:</b> Explain code generation and code optimization schemes<br><b>CO3:</b> Understand the working of linkers and loaders and other development utilities.<br><b>CO4:</b> Design structure of Assembler and macro processor for a hypothetical simulated computer. |  |                                      |                     |
| Credits: <b>04</b>  |  | Type of Course: <b>Core</b>          |                     |
| Max. Marks: <b>100</b>  |  | Min. Passing Marks: <b>36</b>        |                     |
| <b>Block 1</b>  | <b>Introduction to System Software and software tools</b>  |                                      |                     |
| Unit 1  | <b>Language Processors:</b> Introduction, Language Processing Activities, Fundamentals of Language Processing & Language Specification, Language Processor Development Tools.  |                                      |                     |
| Unit 2  | <b>Data Structures for Language Processing:</b> Search Data structures, Allocation Data Structures.  |                                      |                     |
| Unit 3  | <b>Software Tools:</b> Software Tools for Program Development, Editors, Debug Monitors, Programming Environments, and User Interfaces.   |                                      |                     |
| Unit 4  | <b>Assemblers:</b> Elements of Assembly Language Programming, A Simple Assembly Scheme, Pass Structure of Assemblers, Design of a Two Pass Assembler, A single pass Assembler for IBM PC.  |                                      |                     |
| Unit 5  | <b>Macro Processors:</b> Macros and Macro Processors: Macro Definition and Call, Macro Expansion, Nested Macro Calls, Advanced Macro Facilities, Design of a Macro Preprocessor.   |                                      |                     |
| <b>Block 2</b>  | <b>Compilers and Interpreters</b>  |                                      |                     |
| Unit 6  | <b>Lexical Analysis:</b> Introduction to NFA and DFA, Lexical Analysis: Role of a Lexical analyzer, input buffering, specification and recognition of tokens, Finite Automata, Designing a lexical analyzer generator, Pattern matching based on NFA's.  |                                      |                     |
| Unit 7  | <b>Compiler- Syntax Analysis:</b> Syntax Analysis: Role of Parser, Top-down parsing, recursive descent and predictive parsers (LL), Bottom-Up parsing, Operator precedence parsing, LR, SLR and LALR parsers. (First and follow technique for generating a parse table is to be taught), Phases of the Compiler, Aspects of compilation, Memory allocation. Compilation of expressions and control structures.                         |                                      |                     |
| Unit 8  | <b>Compiler- Code Generation:</b> Intermediate languages: graphical representations, DAGs, three address code, types of three address statements, syntax directed translation into three address code, implementation of three address statements.   |                                      |                     |
| Unit 9  | <b>Compiler- Optimization</b> Code Optimization: Machine dependent and machine independent code generation: Sources of optimization-Code Generation-Semantic stacks, evaluation of expressions, control structures, and procedure calls.   |                                      |                     |
| Unit 10   | <b>Interpreters:</b> Use and overview of interpreters, pure and impure interpreters  |                                      |                     |
| <b>Block 3</b>  | <b>Linker, Loaders and device Drivers</b>  |                                      |                     |
| Unit 11   | <b>Loaders and Linkers:</b> Basic loader functions: Design of an Absolute Loader – A Simple Bootstrap Loader, Machine dependent loader features Relocation – Program Linking – Algorithm and Data Structures for Linking Loader. Machine-independent loader features – Automatic Library Search – Loader Options Loader design options – Linkage Editors – Dynamic Linking – Bootstrap Loaders. Implementation examples: MSDOS linker. |                                      |                     |
| Unit 12   | <b>Device drivers:</b> Design and anatomy of UNIX device driver, Types of device driver, General design of UNIX character device driver, General design of UNIX block device driver, UNIX device driver installation.  |                                      |                     |
| <b>Suggested Readings:</b>  |  |                                      |                     |

1. Alfred V. Aho, Jeffrey D Ullman, “Compilers: Principles, Techniques and Tools”, Pearson Education Asia, 2008
2. K.D. Cooper, and L. Torczon,Engineering a Compiler,Elsevier, 2004.

**Suggested online courses (MOOCs)**

1. Compiler Design, IIT Madras by PROF. RUPESH NASRE  
<https://nptel.ac.in/courses/106106237>
2. Principles of Compiler Design, IISc Bangalore by Prof. Y.N. Srikanth  
<https://nptel.ac.in/courses/106108113>
3. NOC:Compiler Design, IIT Kharagpur by Prof. Santanu Chattopadhyay  
<https://nptel.ac.in/courses/106105190>

This course can be opted as an elective by the students of following subjects: **MCA**

Suggested equivalent online courses (MOOCs) for credit transfer: N.A.
